1 1923

1.1 About

Magnificent card game.

1.1.1 Testimonials

“1923 saved my life.” - Local man

1.2 Rules

1.2.1 Players

2 or more players are required to play

- Decks

The number of decks used are dependent on the number of players. To calculate how many decks you should be using, here is a handy-dandy equation:

$$\text{number of decks} = \text{ceil}(\text{number of players} / 3)$$

1.2.2 Gameplay

- Drawing First

All players draw 1 card from the deck. Highest card wins (based on value i.e. 10 is the same as a king). If there is a tie, tied players draw again. Drawn cards are discarded from the game – not reshuffled into the deck.

- Each Round

- Winning

Combined card value (blackjack rules; Ace can be 1 or 11) between 19-23. If multiple players are within that range, the player with the value closest to 23 wins. If no player is within that range, the player with the value closest to 19 or 23 wins (being closer to 19 or 23 are equal). Winning player keeps all cards from the round (including tiebreaker cards).

- * Breaking Ties

Player with the lowest average card value wins. If multiple players have the same average card value, the players will draw a single card and highest card (as before, based on value, i.e. 10 is the same as a king) wins (repeat until winner is found).

- Drawing Cards

1. Every player draws 2 cards and places them face down (without looking at them). The cards should be placed side-by-side and to the right hand side of the “players space.”
2. Asynchronously, each player can draw as many cards as they desire. If a player wishes to look at one of their cards, they must draw an additional card. Each additional card must be placed to the left of the original 2 cards.
3. Each player must lock their left-most card when they are done drawing cards. Once a player has locked, they cannot unlock. To lock, the player turns the card sideways.

4. Once each player has locked, all players must turnover their cards and count their value. Winner is determined as outlined above.

1.2.3 Winning the game

When there aren't enough cards left to carry out another round, the game is over. The winner is the player with the most cards.
